The first workshop

The first viable step

Full Stack Imp. Strategy

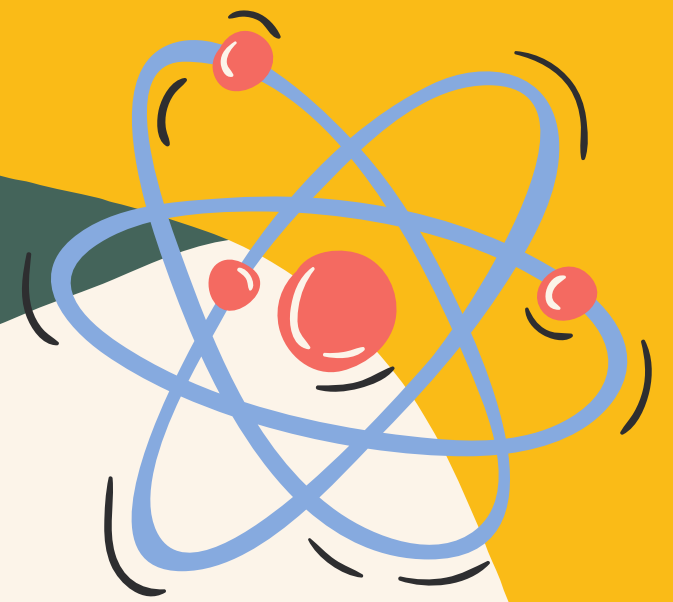

# **Parents, kids and school gather for sustainability**

The idea is to engage parents to take parts in parents-kids-teachers workshops and activities to learn about sustainable initiatives.

# Methodology

Use MIRO  
digital board  
to propose,  
discuss,  
prepare and  
document

- 
- Propose activities or workshops for discussion
  - Brainstorm on how to develop an activity/workshop: who is leading, where is taking place, for how long, material needed, volunteers, etc.
  - Paste pictures or videos of the event

# Bio-technology: 1st topic on fermentation

A bunch of good guys that are helping us achieve:

Less food waste

Better health

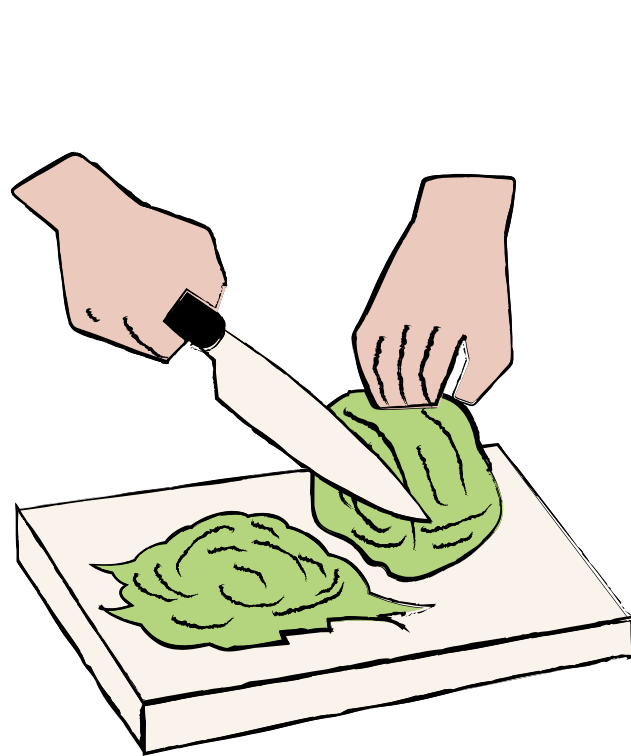

Better taste

# 1st workshop on Sauerkraut

1. Interested parents and kids invited to stay one hour after school
2. Taking place in a workshop room in the school
3. Each kid to bring a recycled jar or glas and leftover cabbage or veggies
4. Provide simple instructions in a kids-friendly format

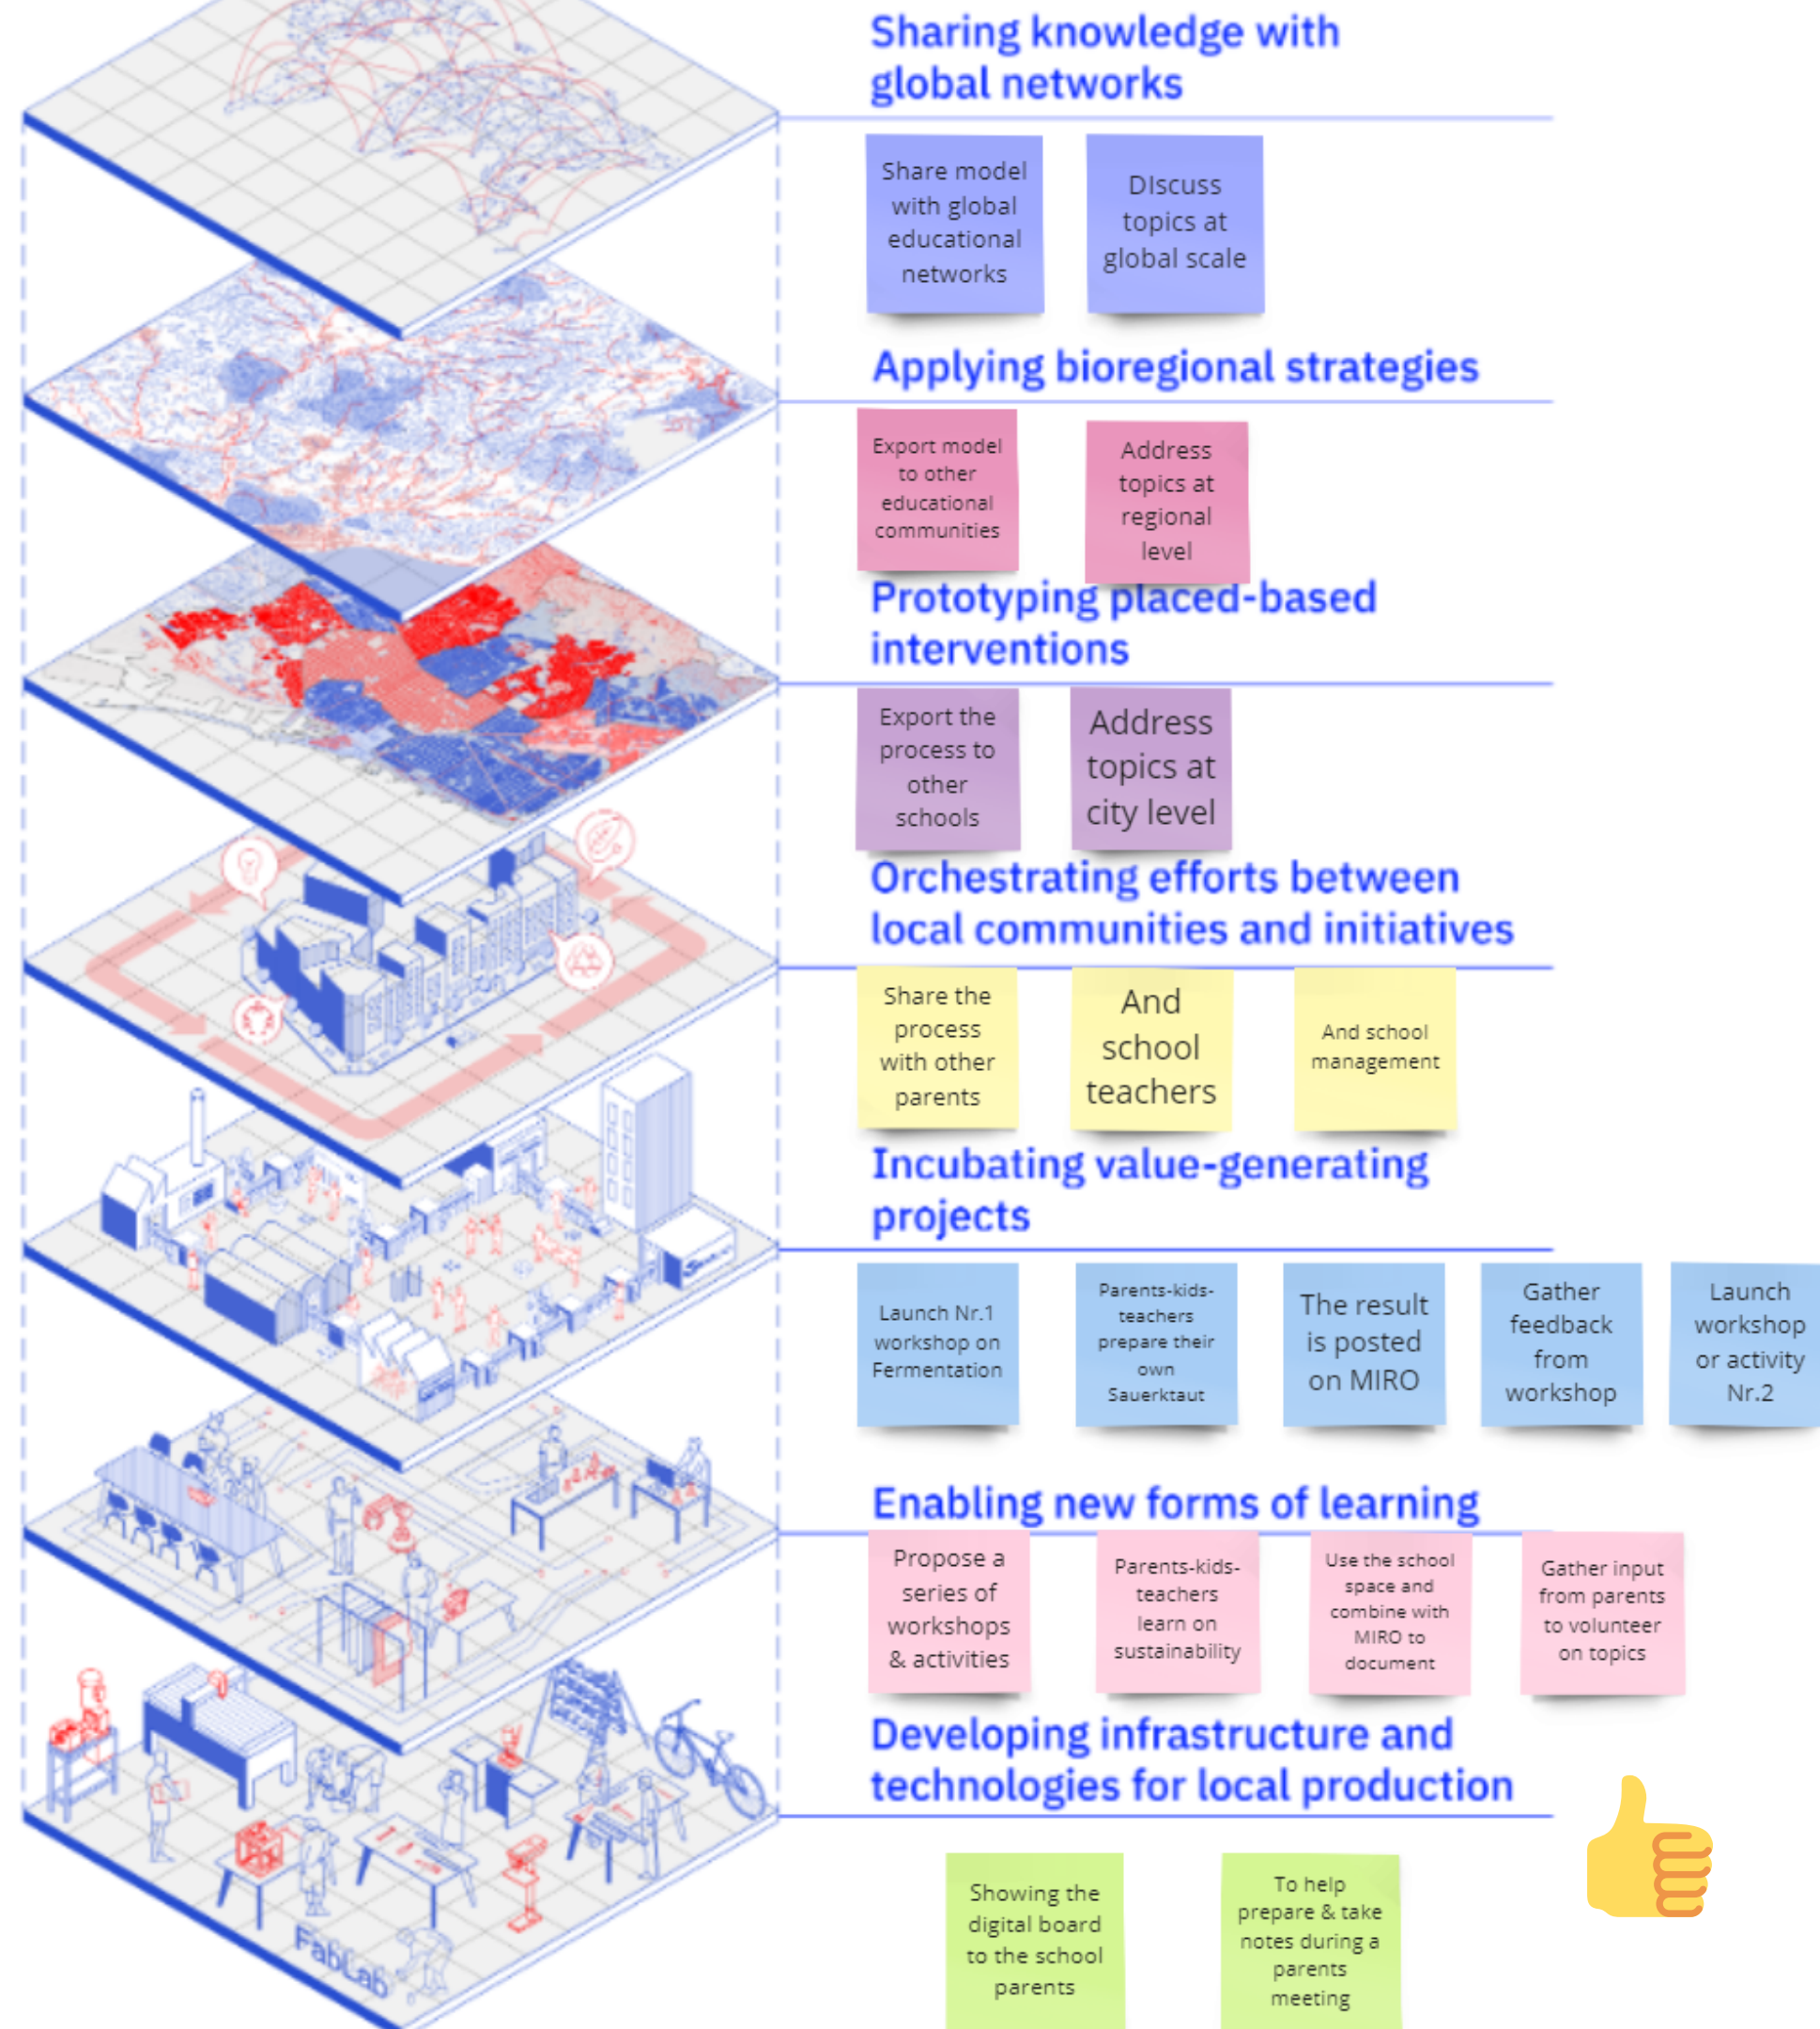

Final step: document the session and upload the evolution of the sauerkraut in Miro

# The first viable step

1. Discuss with the class teacher what are the sustainability topics being addressed
2. Propose a first parents-kids-teachers "hands-on" workshop and ask for a room
3. Organise a call with parents to discuss the idea and take on board their feedback
4. Follow-up with a survey to get input from those not participating in the call.
